

HELVI SpA – Introduces: ‘EVO – Bright Evolution’

During the Schweißen-Schneiden 2017 international trade fair, Helvi S.p.A. introduced to the welding world, the new concept ‘EVO – Bright Evolution’.

EVO is the result of several years of R&D investment backed up by collaboration with demanding experts in the field. EVO combines technological improvements both in Hardware and Software that has resulted in a complete range of Inverters capable of satisfying the most challenging users’ welding requirements.

The benefits of the new EVO range are:

- Equipped with the newest Microprocessor generation
- Use of advanced control

algorithms that guarantees high welding performance

- Faster reaction to electric arc variation and condition
- New welding arc dynamics with reduced spatter
- Possibility to weld all type of electrodes in all welding positions thanks to the new arc performance
- Higher energy efficiency
- New electronic input voltage control which allows a wider range of work
- Automatic VRD to increase electrical safety and energy efficiency
- Optional interface for remote control on either MIG or TIG torchs with the brand new interface Up/Down analog or digital
- Optional Bluetooth® interface for

Auto-darkening helmet T-Link® by Trafimet

- Fast updating via USB port
- Welding data analysis
- TIG: new arc strike “SAFE START” function and Pulse frequency up to 2500Hz
- PLASMA: longer consumable life and improved cutting performance and quality

With the brand new concept “EVO – Bright Evolution”, Helvi S.p.A. brings a higher level of technology to a wide range of

machines designed for professional use. Models that incorporate the EVO brand are:

1. Compact MMA/TIG
2. Multiprocess MAXITECH
3. Multiprocess MULTITECH
4. Plasma PC
