## WELDING SHOES

Safety shoes protect your safety in the workplace and their use is mandatory in many professions. You can also buy work shoes for do-it-yourself activities during your free time, to be protected from injuries even in moments of domestic work.

The S3 protection category includes: anti-crushing toecap, insole with anti-puncture midsole, antistatic sole with shock absorption properties in the heel area, waterproofed upper. HRO (sole heat resistant up to 300°C. for 1 minute). The SRC optional requirement consists of two standards, SRA and SRB. This set of standards establishes the resistance of the sole to slipping. The SRA standard provides that the slip resistance of the sole is tested on a ceramic surface covered with water and detergent, while the SRB standard provides for the resistance test on a steel surface coated with glycerine. The SRC standard includes both methods.

The Agile Safe shoes comply with the basic requirements and therefore have a non-slip sole resistant to oils and hydrocarbons.

	TECHNICAL FEATURES
Upper	black leather water penetration resistant
Lining	3D mesh
Safety toecap	Composite (non metallic) · 200J resistant cap Lighter shoes
Outsole	PU/Rubber · Heat resistant up to 300°C Anti-slip · Oil resistant · Anti-static.
Heel	shock absorber
Plate	Non-metallic. More flexibility
Protection class	S3 HRO SCR
Norms	CE EN ISO 20345:2011
Available size	39 · 40 · 41 · 42 · 43 · 44 · 45 · 46 · 47
Part number	21905149
